

## О ВЛИЯНИИ КРУПНОМАСШТАБНЫХ ВИХРЕВЫХ СТРУКТУР НА ФОРМУ ПЛАМЕНИ В ПОТОКЕ ЗАКРУЧЕННОЙ СТРУИ\*

Л. М. Чикишев<sup>1</sup>, В. М. Дулин<sup>2</sup>, А. С. Лобасов<sup>3</sup>, Д. М. Маркович<sup>4</sup>

**Аннотация:** Представлены результаты экспериментального исследования когерентных структур в закрученной турбулентной струе с горением метановоздушной смеси с избытком воздуха на основе измерений методами анемометрии по изображениям частиц и плоскостной лазерно-индущированной флуоресценции. Реализации поля мгновенной скорости в продольном сечении потока зарегистрированы одновременно с распределениями интенсивности флуоресценции формальдегида и гидроксильного радикала. В результате анализа ансамбля из реализаций скорости методом главных компонент установлено наличие когерентной структуры, соответствующей паре винтовых вихрей, коррелированных с крупномасштабными деформациями фронта пламени.

**Ключевые слова:** горение в закрученной струе; когерентные структуры; прецессирующее вихревое ядро; панорамная лазерно-индущированная флуоресценция; анемометрия по изображениям частиц; метод главных компонент

**Abstract:** The paper reports on results of the experimental study of coherent structures in a lean premixed swirling jet-flame by particle image velocimetry and planar laser-induced fluorescence. The velocity fields are captured in the longitudinal plane simultaneously with the intensity of HCHO and OH\* fluorescence. Based on processing of the velocity fields by principle component analysis, a coherent flow structure is revealed, which corresponds to a pair of helical vortices, correlated to large-scale deformations of the flame front.

**Keywords:** swirling flames; coherent structure; precessing vortex core; planar laser-induced fluorescence; particle image velocimetry; principle component analysis

**DOI:** 10.30826/CE18110205
